

Backend package dependency diagram

API LAYER

Auth

routes and guards

Inventory

catalog endpoints

Pipeline

layout requests

Render

image requests

Saved artifacts

history endpoints

APPLICATION SERVICES

Run case

case orchestration

Snapshot renderer

3D capture service

Saved layouts

layout persistence

Asset service

asset metadata

Image workflow

render and edit calls

DOMAIN MODULES

Room interpreter

brief and geometry parsing

Style and material

visual policy binding

Cluster planning

object relations

Layout solver

placement validation

Gallery selector

variant selection

INFRASTRUCTURE AND TOOLS

LLM client

provider adapter

Database

PostgreSQL access

Artifact store

image and JSON files

Evaluation tools

benchmark utilities

Config

environment settings
